

Madame Paulette

"SIMPLY THE FINEST CUSTOM COUTURE CLEANER IN THE WORLD!"

Professional Stain Removal Kit

Professional Cleaning To Go

The same professional formulas used by Madame Paulette to clean the finest apparel are now available in a safe, convenient and easy-to-use package. Take the expertise of Madame Paulette wherever you go!

The Stain kit was developed with the upscale traveler, hotel guest and bride in mind. Your business suit, casual attire, evening wear, bridal gown has been soiled and there is no time or place for your garment to be cleaned. With the Stain Kit on hand, Madame Paulette's expertise is always available.

Each kit contains sufficient cleaning power to be effective in a variety of situations. When quick action is required, Madame Paulette's portable, practical and effective Professional Stain Removal Kit comes to the rescue.

As Easy As 1 - 2 - 3

Unlike conventional stain removers, Madame Paulette has taken into account the two most important factors for safe and effective stain removal.

Time – The most important!

The sooner the stain can be treated properly, the safer and easier it is to remove.

Stain Identification – Every stain has a different composition. Before anything is applied, it is important to properly identify the stain.

There are three primary stain groups and each one requires a special formula.

1) ***Special Formula 1*** - Earth Based Stains: Fruit juices, teas, colas, liquors, etc.

2) ***Special Formula 2*** - Protein Based Stains: From the body and dairy products, such as blood, perspiration, milk, eggs, etc.

3) ***Special Formula 3*** - Oil Based Stains: From vegetable, mineral, or petroleum oils, such as baby oil, animal fat, salad dressing, mayonnaise, motor oil, grease, etc.

All Inclusive

Each formula is conveniently packaged, easy to use and guarantees excellent results. Here is what you'll find in each foil-sealed packet.

A waffle-pattern absorbent cloth is saturated in the same special formulas that Madame Paulette uses daily in removing stains from the world's most exclusive couture apparel. Each formula is biodegradable and rinses out with water.

A distilled water rinse, that follows the application of each special formula, flushes out any remaining stain particles. Distilled water, unlike tap water, permits the fabric to dry without a ring. Minerals and iron in tap water typically leave an unsightly yellow ring.

A fourth packet is being added to the kit containing three individual super absorbent cloths. Using this cloth under the stained area will help transfer stain matter through the fabric into the absorbent cloth. This will make the stain removal process even more effective.
